

Ronit Jain

Backend Engineer

Jaipur, India | +91-7014850582 | ronitrohil@gmail.com | linkedin.com/in/ronitjain0402 | github.com/RonitRohil | Portfolio ↗

SUMMARY

Backend Engineer with **2+ years** building and operating production-grade systems on Node.js and Python. Resolved a **28,000-connection Redis TCP exhaustion incident** in production using `ss -s` diagnostics and kernel `sysctl` tuning; cut PostgreSQL report queries **from 2–5s to 0.5s** via recursive stored procedures; owns production deployments and backend monitoring independently. Shipped end-to-end fintech modules — GST compliance pipelines, OCR automation, multi-format bank statement parsing — handling thousands of daily transactions across a live ERP.

TECHNICAL SKILLS

Languages: JavaScript (Node.js), Python, TypeScript, SQL

Backend & APIs: Node.js, Express.js, Flask, REST APIs, WebSockets, Bull/Redis Queues, Microservices

Databases & Cache: PostgreSQL (Stored Procedures, Indexing, Query Optimization), Redis, MySQL, MongoDB

AI & Data: OCR Pipelines (Azure Cognitive Services), LLM API Integration, pdfplumber, Pandas, Confidence Scoring

Cloud & DevOps: Microsoft Azure, AWS, Azure Blob Storage, Apache, PM2, Git

PROFESSIONAL EXPERIENCE

AKSSAI ProjExel

July 2024 – Present

Software Engineer (Backend & AI Systems)

Jaipur, India

- Diagnosed and resolved a **production Redis TCP port-exhaustion incident** — 28,000+ established connections identified via `ss -s`, resolved with kernel `sysctl` tuning (`tcp_tw_reuse`, `tcp_fin_timeout`, ephemeral port range expansion), restoring all 8 Bull queue workers; **owns production releases and backend monitoring independently**.
- Optimized complex **PostgreSQL reporting queries** via recursive stored procedures, reducing execution time from **2–5s to ~0.5s** and eliminating production report failures.
- Built end-to-end **GST lifecycle modules** — GSTR-1 filing, E-Way Bill, E-Invoice generation, and GSTR-2A/2B reconciliation — processing thousands of transactional records across multiple financial modules.
- Engineered **OCR-driven invoice automation** with LLM-based field extraction, reducing manual invoice creation by **~80%** and enabling batch processing of up to **1,000 invoices** per upload.
- Built a **multi-format bank statement parser** (PDF/CSV/Excel) with dynamic header detection and per-transaction confidence scoring, cutting manual ledger mapping from **2–3 hours to ~30 minutes (~75% faster)**.

AKSSAI ProjExel

Jan 2024 – Jun 2024

Software Developer Intern

Jaipur, India

- Developed **10+ REST APIs** supporting manufacturing journal workflows; hardened API security by enforcing client-code authorization validation across **300+ endpoints**.

PROJECTS

AI Document Processing System ↗

Python, Flask, Pandas, pdfplumber, React, TypeScript

- Built a multi-format bank statement parser (PDF, CSV, Excel) processing **1,000+ transactions per file** with dynamic header detection and per-transaction confidence scoring.
- Extracted structured metadata (account holder, IFSC, bank, branch) enabling downstream validation via **Pennyless API** for bank account and UPI verification.
- Automated end-to-end document ingestion, cutting processing time from hours to **under 5 minutes** per statement.

EDUCATION & CERTIFICATIONS

B.Tech – Information & Communication Technology

2020 – 2024

Dhirubhai Ambani Institute of Information & Communication Technology (DA-IICT)

Gandhinagar

Azure Fundamentals (AZ-900) ↗ | AWS Cloud Practitioner (CLF-C02) ↗ | DevOps Beginners to Advanced ↗ (Udemy)

AWARDS

Star Performer Award – Q1 2025 (AKSSAI ProjExel): For backend performance optimization, OCR enhancements, and AI-based automation initiatives.
