SUMMARY

Backend Engineer with **2+ years** building production-grade financial systems — GST compliance pipelines, OCR-driven invoice automation, and multi-format bank statement parsers — on a Node.js and Python stack. Reduced manual processing time by up to **80%** across mission-critical fintech workflows. Strong ownership track record: independently managed production deployments, resolved Redis and PostgreSQL performance incidents, and shipped end-to-end AI document processing from design to release.

TECHNICAL SKILLS

Languages: JavaScript (Node.js), Python, TypeScript, SQL

Backend & APIs: Node.js, Express.js, Flask, REST APIs, WebSockets, Microservices

Databases & Cache: PostgreSQL (Stored Procedures, Indexing, Query Optimization), Redis, MySQL, MongoDB

Cloud & DevOps: Microsoft Azure (AZ-900), AWS (CLF-C02), Apache, PM2, Git

AI & Data: OCR Pipelines, pdfplumber, Pandas, Bank Statement Parsing, Regex Parsing

PROFESSIONAL EXPERIENCE

AKSSAI ProjExel

July 2024 – Present

Software Engineer (Backend & AI Systems)

Jaipur, India

- Engineered **OCR-driven invoice automation** and bulk upload workflows, reducing manual invoice creation by **~80%** and enabling batch processing of up to **1,000 invoices** per upload.
- Designed **bank statement parsing** and intelligent ledger suggestion system, cutting manual ledger mapping time from **2–3 hours to ~30–40 minutes (~75% faster)**.
- Built end-to-end **GST lifecycle modules** — GSTR-1 filing, E-Way Bill, E-Invoice generation, and GSTR-2A/2B reconciliation — handling thousands of transactional records across multiple financial modules.
- Optimized complex **PostgreSQL reporting queries** and designed recursive stored procedures, reducing execution time from **2–5 seconds to ~0.5 seconds** and eliminating production report failures.
- Diagnosed and resolved **Redis connection exhaustion** issue; took ownership of **production releases** and backend monitoring, independently managing all deployments and resolving critical runtime incidents.

AKSSAI ProjExel

Jan 2024 – Jun 2024

Software Developer Intern

Jaipur, India

- Developed **10+ REST APIs** supporting manufacturing journal workflows; strengthened API security by enforcing client code authorization validation across **300+ endpoints**.

PROJECTS

AI Document Processing System ↗

Python, Flask, Pandas, pdfplumber, React, TypeScript

- Built a multi-format bank statement parser (PDF, CSV, Excel) processing **1,000+ transactions per file** with dynamic header detection and per-transaction confidence scoring.
- Extracted structured metadata — account holder, IFSC, bank name, branch — enabling downstream validation via **Pennyless API** for bank account and UPI verification.
- Automated end-to-end financial document ingestion, cutting manual processing time from hours to **under 5 minutes** per statement; integrated React + TypeScript frontend with full API response rendering.

EDUCATION & CERTIFICATIONS

B.Tech – Information & Communication Technology

2020 – 2024

Dhirubhai Ambani Institute of Information & Communication Technology (DA-IICT)

Gandhinagar

Microsoft Azure Fundamentals (AZ-900) ↗ | AWS Certified Cloud Practitioner CLF-C02 2025 ↗ | DevOps Beginners to Advanced ↗

AWARDS

Star Performer Award – Q1 2025 (AKSSAI ProjExel): For backend performance optimization, OCR enhancements, and AI-based automation initiatives.
