SUMMARY

Backend Engineer with 2+ years of experience building scalable financial and ERP backend systems using PostgreSQL, Node.js, Redis, and Python. Specialized in financial automation, GST compliance systems, and AI-driven document processing workflows that reduced manual operations by up to 80%. Proven track record of optimizing backend performance, resolving production incidents, and managing deployments across mission-critical financial platforms.

SKILLS

- **Languages:** JavaScript, Python, SQL
- **Backend & Frameworks:** Node.js, Express.js, Flask, REST APIs
- **Databases:** PostgreSQL (Stored Procedures, Indexing, Query Optimization), MySQL, MongoDB
- **Caching & Performance:** Redis
- **AI & Data Processing:** OCR Pipelines, Bank Statement Parsing, Pandas, Regex Parsing
- **Architecture:** REST APIs, WebSockets, Microservices
- **Cloud & Infrastructure:** Microsoft Azure, Apache, PM2
- **Security:** JWT Authentication, CSRF Protection
- **Tools:** Git, Postman, Jira

WORK EXPERIENCE

Software Engineer (Backend & AI Systems)

AKSSAI ProjExel | Jaipur | July 2024 – Present

- Engineered **OCR-driven invoice automation** and **bulk upload workflows**, reducing manual invoice creation effort by ~80% and enabling batch processing of up to 1000 invoices per upload.
- Designed **bank statement parsing** and **intelligent ledger suggestion system**, reducing manual ledger mapping time from 2–3 hours to ~30–40 minutes (~75% faster).
- Engineered end-to-end GST lifecycle modules, including **GSTR-1 filing, E-Way Bill, E-Invoice generation, and GSTR-2A/2B reconciliation** workflows, handling thousands of transactional records across multiple financial modules.
- Built a **WebSocket-based notification system** supporting **real-time alerts** across multiple backend modules, reducing dependency on manual refresh and improving system responsiveness.
- Optimized **complex PostgreSQL reporting queries** and designed **recursive stored procedures**, reducing execution time from 2–5 seconds to ~0.5 seconds and **eliminating production report failures**.
- Refactored **backend architecture and database query logic** to enhance system reliability while independently managing production deployments and resolving critical runtime incidents.
- Diagnosed and resolved **Redis connection exhaustion** issue, restoring queue stability and preventing recurring backend processing failures.
- Collaborated with **finance and operations teams** to resolve backend issues, improving support turnaround time and stabilizing financial workflows.
- Took ownership of **production releases** and **backend monitoring responsibilities**, independently managing deployments.

Software Developer Intern

AKSSAI ProjExel | Jaipur | Jan 2024 - Jun 2024

- Developed 10+ REST APIs supporting manufacturing journal workflows, improving transaction reliability across multiple ERP modules.
- Strengthened API security by enforcing client code authorization validation across 300+ endpoints; streamlined SQL query logic, reducing data inconsistencies in manufacturing journal reports

Backend Intern

AKSSAI ProjExel | Jaipur | May 2023 – Jul 2023

- Built 8+ REST APIs supporting ERP workflows; diagnosed and resolved production-level bugs that had been causing recurring system failures, improving overall platform stability

PROJECTS

FINAC — Enterprise Financial ERP - Internal Product at AKSSAI ProjExel

- Designed PostgreSQL reporting pipelines supporting automated reconciliation across financial modules.
- Implemented GST lifecycle workflows, including GSTR-1 filing, E-Way Bill generation, and reconciliation modules.
- Developed financial and inventory reports supporting multi-branch accounting workflows.
- Optimized reporting performance using indexing and stored procedure refactoring.

AI Document Processing Systems

- Built a multi-format bank statement parser (PDF, CSV, Excel) processing 1,000+ transactions per file with dynamic header detection and confidence scoring per transaction.
- Extracted structured metadata — account holder, IFSC, bank name, branch — enabling downstream validation via Pennyless API for bank account and UPI verification.
- Automated end-to-end financial document ingestion, cutting manual processing time from hours to under 5 minutes per statement.

EDUCATION

B.Tech – Information & Communication Technology

Dhirubhai Ambani Institute of Information & Communication Technology (DA-IICT),
Gandhinagar | 2020 – 2024

CERTIFICATIONS

- Microsoft Azure Fundamentals (AZ-900) — Udemy, Completed 2025
- GraphQL with Node.js — Udemy, Completed 2024
- PySpark: Apache Spark Programming in Python — Udemy, Completed 2025
- Machine Learning & Data Science Bootcamp — Udemy, Completed 2022

AWARDS

Star Performer Award – Q1 2025 (AKSSAI ProjExel): For backend performance optimization, OCR enhancements, and AI-based automation initiatives.
